In the English translation document, please add the abstract at page 11 line 1, as follows:

--ABSTRACT

This invention relates to a method for producing and/or processing a data stream description. According to said method, the data stream description is used to write and/or reference and/or classify sections of a data stream and the data stream description can be transformed by means of a processor using a transformation, the transformed data stream description allowing an adaptation of the data stream. The inventive method is characterized in that one or more sections of a data stream description are marked as processing units, a processing unit containing all information from the data stream description that is required for the transformation of the processing unit by means of the processor into a transformed processing unit. An access to sections of the data stream description outside the processing unit is not required for transformation.--
